

GLOBAL WEEK IN REVIEW

Saturday, 1 August 2026 • Weekend companion to “Daily Need to Know”
Everything that mattered this week. Week ending Friday 31 July 2026 US close. All times GMT+8.

1. Weekly Market Snapshot

Levels are Friday 31 July 2026 US close. Weekly move vs Friday 24 July close. **Green = up** / **Red = down**.

Instrument	Fri Close	Week's Move	Note
S&P 500	7,489.72	+1.05%	Bounced into month-end on MSFT/AMZN; July finished ~flat (≈ -0.6% MTD).
Nasdaq Composite	25,373.85	+1.59%	Round-tripped a vicious mid-week AI/semis drawdown; TREND still bearish.
Dow Jones Ind.	52,485.03	+1.04%	Fourth straight winning month; value/defensive tilt helped.
US 10Y Yield	≈4.70%	higher	Highest since Jan 2025 on sticky inflation + supply (a level, not a %).
US 2Y Yield	≈4.31%	~flat	Anchored by the Fed's hold at 3.50–3.75%.
US 30Y Yield	≈5.25%	higher	Highest since 2007 — the week's loudest macro signal.
Dollar (DXY)	100.19	~flat	Capped by suspected Japanese yen intervention; TREND bullish.
Gold (spot)	≈\$4,086/oz	+~1%	Held ≈\$4,100; Hedgeye TREND bearish (extended).
Silver (spot)	≈\$58/oz	+~2%	Briefly >\$59 on Mideast headlines; supply-tight, TREND bearish.
Brent Crude	≈\$88/bbl	~flat	+~20% in July on Iran/Hormuz; eased late-week on US airstrike pause.
WTI Crude	≈\$85/bbl	~flat	Mid-\$80s; the macro pivot for inflation and the Fed's Sept call.
Bitcoin	≈\$63,870	~-2%	Slid into month-end though broad crypto had its best month in a year.

Note: minor cross-source divergence exists on some closes (e.g., aggregators quoting the S&P near 7,467 vs the 7,489.72 print used here); yield weekly moves are directional (verify basis-point deltas live).

2. TL;DR — What Defined the Week

A stagflationary week that stocks shrugged off. US Q2 GDP slowed to **1.5%** while June core PCE held at **3.3%**, and a Fed under new Chair **Kevin Warsh** held at **3.50–3.75%** (a divided **9–3**, three hawkish dissents) — driving the 30Y to its **highest since 2007** and the 10Y back above **4.7%**. Yet indices rallied into month-end as the AI-capex reckoning **split Big Tech**: **Microsoft** and **Amazon** soared on cloud, while **Alphabet** and **Meta** were punished for spending. Leadership rotated hard into energy, healthcare and defensives — and Hedgeye's model flags the tell: July's **#Quad4** is flipping to **#Quad3** for August as oil and commodities re-accelerate inflation.

3. The Big Picture — What the Week Meant

1) The AI-capex verdict split Big Tech

Microsoft rose ~8–9% (Azure +43%, RPO \$678B, 30M Copilot seats) and **Amazon** surged +15.3% Friday (AWS +37%, first \$200.6B quarter). By contrast **Alphabet** fell ~15% despite Cloud +82%, and **Meta** ~10% despite revenue +28% — both punished for AI capex. **Apple** slid on a memory/chip crunch and soft China/Services.

Read: Owning “AI infrastructure” is no longer a free pass — the market now demands ROIC visibility. Barbell toward hyperscalers monetizing cloud (MSFT, AMZN) and fade those still spending into the promise.

2) A factor unwind, not an index crash

Per Hedgeye, July was the **worst month for levered consensus hedge-fund positioning since 2023**: TMT memory -30.5%, GS high-beta momentum -30.9%, AI data centers -19.4%. Yet the same month paid GARP software +8.4%, US healthcare +5.3% and REITs +4.5%. Even on down-momentum days, **71% of SPY names were green**.

Read: This is a crowded-trade purge, not a market breakdown. Fade strength in momentum/growth; own dividends, healthcare, energy and equal-weight.

3) Rates repriced higher — stagflation, not disinflation

The **30Y** hit its **highest since 2007** and the **10Y** topped 4.7%, its highest since January 2025 — the collision of sticky 3.3% core PCE, slowing 1.5% growth and a hawkish Warsh Fed.

Read: Duration is a source of risk, not safety. The long end is doing the Fed’s tightening; long bonds remain a poor hedge in a Quad3 tape.

4) Oil is the macro pivot

Brent gained ~20% in July on Iran / Strait-of-Hormuz escalation before a late-week **US airstrike pause** eased the spike and helped equities bounce.

Read: Energy is simultaneously the inflation driver and the leadership trade. Own the cash-flow (XLE, refiners); the commodity itself is the swing factor for the September Fed decision.

5) The Fed held — but the hawks are restless

The FOMC held 3.50–3.75% on a 9–3 vote, with three officials (incl. Logan, Hammack) dissenting for **hikes**. Warsh shortened the statement and stressed conditions over guidance; markets now price the **first 2026 hike for September**.

Read: “Higher for longer” has mutated into “maybe higher.” Front-end carry is fine; the tail risk is a hawkish surprise, not a cut.

6) Regime shift: Quad4 → Quad3

Hedgeye’s US monthly Nowcast was **#Quad4** for July (growth & inflation both slowing) and flips to **#Quad3** for August (growth slowing, inflation **re-accelerating**) on the commodity breakout.

Read: Quad3 favors energy, gold/precious, commodities and value/quality; it punishes long-duration growth and long bonds. Position for the inflation re-acceleration.

4. Rates, Currencies & Commodities

Rates & credit

The curve steepened the ugly way: **10Y** ≈4.70% (highest since Jan 2025), **30Y** ≈5.25% (highest since 2007), while the **2Y** ≈4.31% stayed pinned by the Fed hold. Credit stayed orderly — high yield (**HYG**) neutral in a **78.97–79.76** range,

but investment grade (LQD) bearish (105.7–107.3) as duration bit. Drivers: sticky inflation, heavy issuance, and wavering faith in Warsh’s resolve.

Currencies

The DXY closed ≈100.19, broadly flat on the week and capped by suspected **Japanese intervention** to strengthen the yen. Hedgeye’s USD TREND is **bullish** (99.76–102.01) — a firm-dollar backdrop that is a headwind for ex-US and a mild offset to the commodity impulse.

Commodities

Oil was the story: **Brent** ≈\$88 / **WTI** ≈\$85, +~20% in **July** on the Iran conflict before easing on the US airstrike pause. **Gold** ≈\$4,086 held the \$4,100 shelf (TREND bearish 3,991–4,139); **silver** ≈\$58 briefly popped >\$59 on Mideast headlines (TREND bearish, i.e., extended 55–60). Copper firm (**bullish**), natural gas soft (**bearish**).

5. Hedgeye Risk Ranges & Regime

Regime: US monthly Nowcast #Quad4 (July) → #Quad3 (August). Growth keeps slowing; inflation re-accelerates sequentially on the oil/commodity breakout. July was branded the **worst month for levered consensus positioning since 2023**. Source: Hedgeye Early Look “Quad Candy vs. Crowded Carnage” (29 Jul) and “Crash, Bounce, Then?” (31 Jul, 07:38 ET ≈ 19:38 GMT+8).

Immediate-term Risk Range™ Signals (from 31 Jul Early Look)

Instrument	Risk Range	TREND
US 10Y Yield (UST10Y)	4.59 – 4.71	Bullish
High Yield (HYG)	78.97 – 79.76	Neutral
Inv. Grade Corp (LQD)	105.7 – 107.3	Bearish
S&P 500 (SPX)	7,316 – 7,538	Bullish
Nasdaq Composite (COMPQ)	24,314 – 25,569	Bearish
Russell 2000 (RUT)	2,904 – 2,990	Bullish
Technology (XLK)	165 – 181	Bearish
Health Care (XLV)	159 – 168	Bullish
Real Estate (XLRE)	44.99 – 46.40	Bullish
Volatility (VIX)	15.77 – 20.56	Bearish
US Dollar Index (USD)	99.76 – 102.01	Bullish
WTI Crude (WTIC)	79.27 – 92.90	Bullish
Natural Gas (NATGAS)	2.61 – 2.93	Bearish
Gold (spot)	3,991 – 4,139	Bearish
Copper (spot)	6.19 – 6.59	Bullish
Silver (spot)	55 – 60	Bearish

Where we sit

Friday was explicitly framed as “**Day 1 of a bounce**” off immediate-term oversold in tech (XLK closed ≈166 vs its 165–181 range). The **SPX TREND is bullish** but **Nasdaq / XLK TREND is bearish** — own the index, rent the tech bounce. McCullough reduced his XLK short to **minimum size** near the lows and will stop out only on a close back above **\$180**; he added **Energy** via **XLE** and **CRAK**, and stays long healthcare, REITs, dividends and precious-adjacent. Net: respect the bounce, but the TREND signals still say growth/tech is guilty until it recaptures its levels.

6. Mag7 Scoreboard

Prices are verified regular-session closes for Friday 31 Jul (4:00pm ET; source: S&P Global Market Intelligence via stockanalysis.com) — after-hours prints differ (listed below). **Fri %** is the **close-over-close** move (vs the 30 Jul close): a broad tech bounce lifted every name **except Apple**, which sank on a memory-cost shock. Market caps are approximate.

Name	Fri Close	Fri %	Mkt Cap	P/E	Read
Nvidia (NVDA)	\$200.75	+2.9%	≈\$4.9T	~40x	Rebounded with the Friday tech bounce; likely retook #1 after Apple's slump. Hedgeye TREND still bearish.
Apple (AAPL)	\$308.91	-7.4%	≈\$4.5T	~36x	Record \$109.4B June qtr, but a memory-cost "100-yr flood" + soft China/Services; worst drop in ~16 months, erasing its YTD lead.
Microsoft (MSFT)	\$464.72	+3.0%	≈\$3.5T	~37x	Azure +43%, RPO \$678B (reported 29 Jul). Only Mag7 name with a bullish TREND.
Amazon (AMZN)	\$271.58	+15.3%	≈\$2.9T	~35x	AWS +37% (fastest since '21); first \$200.6B qtr; capex ~\$220B. Friday pop = the earnings reaction.
Alphabet (GOOGL)	\$356.13	+6.7%	≈\$4.3T	~27x	Bounced hard Friday; the ~15% capex-driven drop was last week's print. Cloud +82%. Cheapest Mag7.
Meta (META)	\$556.71	+3.3%	≈\$1.4T	~28x	Recovered Friday after a ~8% drop on 30 Jul; rev \$60.8B (+28%) but EPS miss + heavy AI capex.
Tesla (TSLA)	\$311.20	+0.8%	≈\$1.0T	~297x	Fell post-earnings prior week; richest multiple in the group.

After-hours (7:59pm ET): NVDA \$198.95 · AAPL \$307.34 · MSFT \$461.85 · AMZN \$270.50 · GOOGL \$354.20 · META \$553.88 · TSLA \$309.26. Percentage moves above are close-over-close and exclude these.

Leadership read: The Mag7 is no longer one trade. On earnings, cloud-monetizers (**MSFT**, **AMZN**) were rewarded while capex-spenders (**GOOGL**, **META**) and **Apple** were punished — though all except Apple joined Friday's broad bounce, and **Nvidia** round-tripped (weekly -2.9%, Friday +2.9%). Only Apple's memory-cost shock left a lasting hole. Intra-group dispersion is the widest in years — a stock-picker's tape inside a cap-weighted index. Hedgeye's momentum signals agree: only MSFT bullish, AMZN neutral, the rest bearish/mixed.

7. Positioning & Options

VIX: spiked from ≈16.6 (22 Jul) to ≈20.7 (29 Jul) as the tech unwind peaked, then faded to ≈16.4 by Friday; the July range was 14.96–20.88. Hedgeye's VIX TREND is **bearish** (15.77–20.56) — vol keeps trending lower despite the pops.

Credit: high-yield spreads stayed contained (**HYG** neutral) while investment grade (**LQD**) was pressured — the damage was rate-driven, not credit-driven.

Net read: This was a **positioning/factor purge, not a systemic event** — credit calm, VIX spike round-tripped. Use vol spikes to add to Quad3 winners; the pain is concentrated in crowded growth, not the broad market.

8. Sector Rotation — Leaders & Laggards

Leaders: **Energy (XLE)** took the top weekly rank on the oil breakout; **Healthcare (XLV)** (+5.3% in July) led the daily ETF re-rank (+12); **REITs (XLRE)** +4.5%; equal-weight (**RSP** +9), plus financials, industrials and **gold (AAAU** +6). **Laggards:** **Technology/semis (XLK)** — memory -30.5%, AI data centers -19.4% — and high-beta momentum -30.9%.

Read: Leadership is rotating from long-duration growth to value/quality/commodity-linked — the textbook Quad3 playbook (energy, healthcare, REITs, dividends). KM put money where the model is, buying XLE/CRAK.

9. Corporate News — Key Earnings & Events

- **Microsoft** (29 Jul): beat; Azure **+43%**, RPO **\$678B**, 30M Copilot seats; stock **+~8-9%**.
- **Meta** (29 Jul): revenue **\$60.8B (+28%)** but EPS miss and heavy AI capex; stock fell **-8%** on 30 Jul, then rebounded **+3.3%** Friday to **\$556.71**.
- **Amazon** (30 Jul): first **\$200.6B** quarter, AWS **+37%** (fastest since 2021), capex **~\$220B**; stock **+15.3%** on Friday to **\$271.58**.
- **Apple** (30 Jul): record June-quarter revenue **\$109.4B** but Services and China soft amid a memory-cost “100-year flood”; stock **-7.4%** Friday to **\$308.91** — its worst drop in ~16 months.
- **Alphabet** (reported prior week): a **~15%** capex-driven drop, but Cloud **+82%**; shares rebounded **+6.7%** Friday to **\$356.13**.
- **Tesla** (prior week): shares dropped post-earnings; valuation the richest in the group.
- **Nvidia**, AMD and Intel sold off mid-week on AI-spend and geopolitics, but semis rebounded Friday; **NVDA** **+2.9%** to **\$200.75**.
- **Apple** reclaimed the **world’s most valuable company** title on 27 Jul (**≈\$4.94T**), but Friday’s **-7.4%** slump likely handed #1 back to **Nvidia** (**≈\$4.9T**).

10. Macro Data — Key Releases

US Q2 GDP (advance): 1.5% annualized, a step down from Q1.

Net: The “slowing” half of Quad3 is confirmed; growth momentum is fading even before the rate hit fully bites.

US June core PCE: 3.3% y/y (from 3.4%), headline **3.7%**; core **+0.1%** m/m. Energy fell 5.9% (gasoline -9.2%) on a temporary Mideast ceasefire.

Net: Still well above the 2% target and the energy relief looks temporary — disinflation has stalled just as oil re-accelerates.

FOMC (28-29 Jul): held **3.50-3.75%**, **9-3**, three hawkish dissents; Warsh’s statement was notably shorter.

Net: No cuts on the horizon; the market now prices the first 2026 **hike** for September. The risk is a hawkish surprise.

China July manufacturing PMI: 49.2 (from 50.3) — back in contraction, ending a four-month growth run; high-tech mfg **53.3** held up.

Net: Demand is soft and stimulus pressure on Beijing builds — a disinflationary global offset, but not yet a reflation signal.

Eurozone Q2 GDP: +0.4% q/q, **+1.0%** y/y — a beat.

Net: Europe is firmer than feared; it keeps the ECB’s tightening bias and a September hike live.

11. Geopolitics

The **US-Iran** confrontation escalated through July: Iranian strikes on commercial vessels drew **US CENTCOM** strikes on Iranian targets; President Trump declared the June Islamabad truce over (8 Jul), and tit-for-tat strikes followed, with US operations pushing deeper into Iran and Iranian missiles targeting regional US positions. **Strait of Hormuz** disruption drove oil **+~20%** before a late-week **US airstrike pause** cooled both crude and equity nerves.

Prediction markets (Polymarket): the Iran complex is heavily traded — ~191 Iran markets (36 on oil); the "US × Iran ceasefire by...?" market has >\$280M of volume, and "Strait of Hormuz traffic returns to normal by 31 July?" was among the most active. **(Specific live odds not captured — verify on Polymarket.)**

Read: Oil is hostage to headlines. A durable ceasefire is the single biggest disinflationary catalyst (bearish energy longs, bullish duration/growth); renewed escalation is the Quad3 accelerant. Keep the book barbelled to survive either tape.

12. Beyond the Markets

Summits, conferences & talks

The **FOMC (28–29 Jul)** was Warsh's second meeting as Chair; ECB commentary clustered around the Eurozone GDP/CPI prints ahead of a live September decision.

Science & frontier research

- A **quantum-sensor** advance (7 Jul) moves toward detectors for dark matter and ancient gravitational waves.
- China's **Chang'e-6** far-side samples (21 Jul) show the Moon's two hemispheres differ in how deep solar-wind particles penetrate.
- **JWST** profiled the lava-planet **55 Cancri e** (15 Jul); NASA's Swift observed a supermassive black hole tidally shredding a star ~30,000 ly away (28 Jul).

Space & frontier tech

- **SpaceX** launched a classified US reconnaissance mission from Cape Canaveral (30 Jul).
- **NASA** awarded ≈\$600M for four commercial Moon landings (2028) and selected 41 tech projects for Moon/Mars; Artemis III orbital-rehearsal prep continued.

Weather & climate (market-moving)

No single verified US weather shock this week; the energy bid was geopolitical + seasonal-demand driven. Watch the Atlantic hurricane season as a Gulf-refining and nat-gas risk into August.

Water cooler (sport, screen, games)

A busy combat-sports calendar: UFC International Fight Week wrapped and **UFC Fight Night: Ankalaev vs. Rountree Jr.** ran in Abu Dhabi (25 Jul), alongside the post-Wimbledon tennis lull.

13. Appendix — Stock Cards

Compact cards for every name materially discussed. Prices/caps marked “**verify live**” could not be tied to a single primary source this run; P/E, 52-week context and 6-month trend are directional. **Always verify live before acting.**

Nvidia (NVDA)	
Price (31 Jul)	\$200.75 close (+2.9% c/c); after-hrs \$198.95
Mkt cap	≈\$4.9T (likely retook world #1 on Friday)
P/E	~40x (fwd, approx)
Dividend	de minimis (~0.02% yield)
52-wk	wide range; June -11%, choppy into July
Key dates	No print this week; next earnings late Aug (verify)
6-mo trend	Round-tripped a June drawdown; rebounded +2.9% on Friday with the broad tech bounce (“Nvidia rises — thank Amazon”).
Read	<i>Hedgeye TREND bearish — the AI-hardware bellwether is guilty until it recaptures its risk range.</i>

Apple (AAPL)	
Price (31 Jul)	\$308.91 close (-7.4% c/c); after-hrs \$307.34
Mkt cap	≈\$4.5T (held #1 on 27 Jul; likely ceded it Friday)
P/E	~36x
Dividend	~0.4% yield
52-wk	was YTD ~+22% (top Mag7); Friday's -7.4% erased much of that lead
Key dates	FQ3 (June qtr) reported 30 Jul: record \$109.4B rev
6-mo trend	Strong uptrend into a record quarter, then the print exposed China/Services softness and a memory-cost squeeze; worst single-day drop in ~16 months.
Read	<i>From Wall Street's AI haven to the week's biggest earnings loser — own quality, but the memory-cost shock and guide are now the swing factors.</i>

Microsoft (MSFT)	
Price (31 Jul)	\$464.72 close (+3.0% c/c); after-hrs \$461.85
Mkt cap	≈\$3.5T (approx)
P/E	~37x
Dividend	~0.7% yield
52-wk	steady leader; strengthened post-print
Key dates	FQ4 reported 29 Jul: Azure +43%, RPO \$678B
6-mo trend	Grind-higher trend reaffirmed by the cloud beat; the cleanest AI-monetization story in the group.
Read	<i>Only Mag7 name with a bullish Hedgeye TREND — the reference long for AI done right.</i>

Amazon (AMZN)	
Price (31 Jul)	\$271.58 close (+15.3% c/c); after-hrs \$270.50
Mkt cap	≈\$2.9T (approx)
P/E	~35x
Dividend	none
52-wk	recovered hard; +~8-10% on the print

Key dates	Q2 reported 30 Jul: first \$200.6B qtr, AWS +37%
6-mo trend	Broke out on the cloud re-acceleration after a mid-year consolidation.
Read	<i>AWS growth is the bar and Amazon cleared it; capex is huge but tied to demand. TREND neutral, momentum up.</i>

Alphabet (GOOGL)	
Price (31 Jul)	\$356.13 close (+6.7% c/c); after-hrs \$354.20
Mkt cap	≈\$4.3T (approx)
P/E	~27x (cheapest Mag7)
Dividend	~0.4% yield
52-wk	de-rated ~15% on the capex reaction
Key dates	Reported prior week: Cloud +82%
6-mo trend	Uptrend broke on the earnings reaction despite blistering Cloud growth — capex fear overwhelmed the beat.
Read	<i>Cheapest Mag7 multiple; the market is paying for spending discipline, not growth. A value-in-growth watch.</i>

Meta (META)	
Price (31 Jul)	\$556.71 close (+3.3% c/c); after-hrs \$553.88
Mkt cap	≈\$1.4T (approx)
P/E	~28x
Dividend	~0.3% yield
52-wk	–8% on the 30 Jul print, then +3.3% Friday
Key dates	Q2 reported 29 Jul: rev \$60.8B (+28%), EPS miss
6-mo trend	Momentum snapped on the EPS miss and capex ramp after a strong first half.
Read	<i>Top-line still humming (+28%) but the Street wants capex-to-cash-flow proof. Re-rating risk near-term.</i>

Tesla (TSLA)	
Price (31 Jul)	\$311.20 close (+0.8% c/c); after-hrs \$309.26
Mkt cap	≈\$1.0T (approx)
P/E	~297x (far the richest Mag7)
Dividend	none
52-wk	volatile; fell after earnings prior week
Key dates	Reported prior week
6-mo trend	High-beta and range-bound to lower after the print; the most sentiment-driven name in the group.
Read	<i>The valuation leaves no margin for error — a momentum vehicle, not a value one, in a Quad3 tape that punishes both.</i>

Key ETFs referenced: XLE / CRAK (energy — Quad3 leaders), XLV (healthcare — bullish TREND), XLRE (REITs — bullish), XLK (tech — bearish), RSP (equal-weight), HYG/LQD (credit). See the Risk Range table in §5 for levels.
