

Global Week in Review

Weekend companion to the Daily Need to Know

Everything that mattered this week. Week ending Friday 11 September 2026, US close. All times GMT+8.

1. Weekly market snapshot

Instrument	Fri close	Week move	YTD	Note
S&P 500	7,656.98	-0.80%	+11.9%	Four-day slide, then +0.84% Fri bounce
Nasdaq Composite	26,333.04	-0.66%	+13.3%	Semis the drag; +0.96% Fri
Dow Jones	52,573.29	-1.57%	+9.4%	Weakest major; rate-sensitives hit
US 10Y yield	4.96%	Higher	—	+18 bp on week; near highest since Oct-23
US 2Y yield	4.63%	Higher	—	+26 bp; highest since Jul-24 (bear-flattening)
US Dollar (DXY)	99.11	Higher	—	4th straight weekly gain
Gold (spot)	\$4,408.90	-1.51%	—	Off Sep-3 record ~\$4,540; still historically high
Silver (spot)	\$65.19	-2.34%	—	Followed gold lower off the highs
Brent crude	\$104.61	+8.65%	—	Touched \$108 intraday (Iran/Hormuz)
WTI crude	\$100.05	+11.00%	—	Biggest weekly gain since mid-July; -2.4% Fri
Bitcoin	\$77,256	-3.04%	—	Slipped below \$80k; risk-off

Levels are Friday 11-Sep close; "Week move" is vs Friday 4-Sep close (US markets shut Mon 7-Sep for Labor Day). Yields shown in bp; "Higher/Lower" used where a % move is less meaningful than direction.

2. TL;DR — what defined the week

TL;DR — An inflation-and-oil shock reset the tape. A US-Iran flare-up in the Strait of Hormuz drove crude up ~9–11%, hot August CPI (+3.4% y/y) and PPI (+5.4% y/y) followed, and the 2-year yield ripped +26 bp to 4.63% as fed-funds futures swung to pricing a rate hike at next week's FOMC. Equities fell for four straight sessions before a Friday relief bounce left the S&P down ~0.8% and the Dow off ~1.6% on the week. This is a textbook Hedgeye [#Quad3](#) print: inflation re-accelerating, growth slowing, energy taxing everything.

3. The big picture — what the week meant

1. The oil shock is now the macro. A resurgent US-Iran conflict — US strikes on IRGC targets, Houthi attacks toward Saudi Arabia and the Bab al-Mandab, and Saudi August output collapsing to ~6.24 mb/d (lowest since 1990) — sent Brent to \$108 intraday and WTI up double digits on the week. Energy is no longer a sector story; it is the inflation story.

Read: Own the beneficiary (energy, real assets), respect the cost (margins, the consumer, the Fed). An oil-led CPI is the hardest kind for a central bank to "look through."

2. Inflation re-accelerated — and the Fed pivoted with it. Headline CPI +3.4% y/y and PPI +5.4% y/y both printed hot, energy-led. Fed-funds futures flipped from "hold-all-year" to pricing a 25 bp HIKE at next week's meeting (roughly two-thirds odds after PPI, rising toward ~90% after CPI).

Read: A hike into a slowdown is the policy error markets fear most. Duration and long-duration equity (unprofitable tech, richly-valued growth) carry the most risk into the decision.

3. Bonds did the repricing; stocks mostly held. The 2Y ripped +26 bp to 4.63% and the 10Y +18 bp to 4.96%, a bear-flattening consistent with "higher-for-longer, maybe higher-from-here." Yet the S&P fell under 1% and VIX stayed sub-16.

Read: The rates market is screaming while equity vol whispers. Either bonds are overreacting or equities are complacent — that gap is the week's central tension.

4. Leadership rotated out of AI-semis. A Broadcom/Oracle “AI reality-check” knocked the semis — NVIDIA -5.2% on the week — while Apple (+3.8%, post-event), Meta (+5.1%) and Tesla (+3.2%) led. Energy was the standout sector; defensives and rate-sensitives (utilities, healthcare) lagged.

Read: The AI trade is being asked to show cash, not backlog. Broadening away from a handful of semis is healthy in principle, but it happened on a down week — rotation, not expansion.

5. Gold and crypto took a breather; the dollar didn’t. Gold slipped ~1.5% off its Sep-3 record and Bitcoin fell below \$80k, while the DXY logged a 4th straight weekly gain. Rising real yields and a firmer dollar squeezed the non-yielding hedges.

Read: In a Quad3 oil-and-dollar-up regime, the dollar itself is a hedge. Gold’s pullback looks like a correction within an uptrend, not a top — watch \$4,370 support.

6. The global backdrop turned hawkish in unison. The ECB hiked 25 bp to 2.50% and lifted its inflation forecasts the same week; China CPI ticked up to +0.8%. The disinflation trade that defined early 2026 is on hold worldwide.

Read: Synchronized hawkishness removes the “someone will ease” backdrop. Cross-asset correlations can rise — size positions for less diversification benefit than the last two years offered.

4. Rates, currencies & commodities

Rates & credit

The week’s defining move was in the front end. The **2Y yield** jumped +26 bp to **4.63%** — its highest since July 2024 — while the **10Y** rose +18 bp to **4.96%**, near its highest since October 2023. The 2s10s bear-flattened as the market priced a Fed that may hike rather than cut. Credit, notably, stayed calm: US high-yield OAS held in the ~265–285 bp area (richest decile of history) and IG near ~80 bp — no stress signal yet, though that is exactly what late-cycle complacency looks like.

Read: The bond market has done a hawkish repricing that equities and credit have only partly acknowledged. Keep powder dry into the FOMC; a hike + hawkish dots could force credit to catch down.

Currencies

The **US Dollar (DXY)** finished at **99.11**, a 4th consecutive weekly gain, powered by the yield surge and safe-haven demand. **EUR/USD** sat near **1.160** even after the ECB’s own hike — the dollar’s rate advantage and the oil-importer hit to Europe outweighed it.

Read: Dollar-up is both a tightening of global financial conditions and, in a Quad3, a hedge. Watch EM and dollar-funded carry for the first cracks.

Commodities

Energy was the week. **Brent** closed **\$104.61** (+8.7%), touching **\$108** intraday; **WTI** settled **\$100.05**, up roughly 11% — its biggest weekly gain since mid-July — before a -2.4% Friday exhale. **Gold** eased 1.5% to **\$4,408.90** and **silver** fell 2.3% to **\$65.19**, both correcting off record territory as real yields and the dollar rose.

Read: Oil is a geopolitical premium, not a demand story — it can unwind as fast as it built if Hormuz headlines cool. But the supply damage (Saudi output, tanker rates) argues for a persistent risk premium. Barbell energy longs with tail hedges.

5. Hedgeye risk ranges & regime

Regime: Hedgeye’s framework has this week squarely in **#Quad3** — inflation re-accelerating while growth decelerates, with an oil shock “taxing” the economy (“Oil Up, Dollar Up = #Quad3”). Hedgeye has flagged the risk of 6%+ headline CPI into Q4, which would tilt parts of the tape toward #Quad2 on the inflation axis. The front-end repricing this week (2Y +26 bp) is the Quad3 nowcast playing out in real time.

Instrument	Immediate-term range (derived)	TREND bias
S&P 500	7,540 – 7,720	Bearish TREND (broken)
Nasdaq Composite	25,900 – 26,600	Bearish TREND
US 10Y yield	4.78% – 4.99%	Bullish (yields up)

Instrument	Immediate-term range (derived)	TREND bias
US 2Y yield	4.37% – 4.66%	Bullish (yields up)
US Dollar (DXY)	98.4 – 99.5	Bullish TREND
Gold	\$4,370 – \$4,545	Bullish TREND (correcting)
WTI crude	\$92 – \$108	Bullish TREND
Bitcoin	\$75,900 – \$81,300	Bearish TREND

Ranges above are immediate-term bands derived from this week's actual trading and the prevailing TREND, presented in Hedgeye's format. They are consistent with the #Quad3 setup but are not Hedgeye's proprietary published risk-range levels for this specific date, which could not be verified live this run (most recent verifiable Hedgeye Quad/oil commentary referenced Sep-2026).

Where we sit

The tape is doing what Quad3 tells it to: energy and the dollar bid, real yields up, gold correcting within an uptrend, and equity TREND lines breaking with a relief bounce that has not yet repaired the damage. The signal from bonds is unambiguous; the signal from equity vol (VIX 15.8) is not. Until the FOMC resolves the hike question, treat rallies as tactical and keep the inflation-beneficiary / long-duration-risk barbell.

6. Mag7 scoreboard

Company	Price	Week	Mkt cap	P/E*	52-wk range
NVIDIA (NVDA)	\$218.29	-5.24%	\$5.29T	~46x	\$164.27 – \$236.54
Apple (AAPL)	\$332.27	+3.84%	\$4.88T	~35x	\$229.02 – \$344.57
Alphabet (GOOGL)	\$338.50	+0.01%	\$4.10T	~26x	\$235.84 – \$408.61
Microsoft (MSFT)	\$495.63	-0.81%	\$3.68T	~34x	\$349.20 – \$553.72
Amazon (AMZN)	\$256.78	-0.67%	\$2.76T	~35x	\$196.00 – \$287.20
Meta (META)	\$648.03	+5.07%	\$1.65T	~26x	\$520.26 – \$790.80
Tesla (TSLA)	\$365.44	+3.21%	\$1.44T	~150x	\$297.38 – \$498.83

*P/E figures are approximate trailing multiples for orientation and were not tied to a primary source at Friday's close — verify before use. Prices and market caps are Friday 11-Sep close (verified); weekly moves vs 4-Sep close.

Leadership read: the week fractured the “one big AI trade.” **NVIDIA** (-5.2%) led semis lower on a Broadcom/Oracle expectations reset, while **Meta** (+5.1%), **Apple** (+3.8%, riding its product event) and **Tesla** (+3.2%) carried the group. **Microsoft**, **Amazon** and **Alphabet** were roughly flat-to-down. Concentration risk cuts both ways: the same seven names that masked a weak week can amplify the next AI wobble.

7. Positioning & options

The **VIX** rose ~9% on the week to **15.84**, spiking to **17.84** on Thursday's selloff before the Friday bounce pulled it back under 16 — elevated relative to summer calm but still low in absolute terms. Credit stayed orderly (HY OAS ~265–285 bp, IG ~80 bp). The net read: positioning is not yet defensive. A sub-16 VIX into a live FOMC hike debate is cheap insurance — the market is under-hedged for a hawkish surprise.

***Read:** Convexity is on sale. With vol low and a binary policy event ahead, hedges (index puts, VIX calls) cost little relative to the scenario they protect.*

8. Sector rotation — leaders & laggards

Leaders: **Energy** was the clear weekly winner on the ~9–11% crude move. On Friday's broad bounce, 9 of 11 S&P sectors rose, with Technology, Industrials and Communication Services each up over 1%.

Laggards: Utilities and Healthcare lagged on the week; rate-sensitives (utilities, real estate) were pressured by the yield spike, and semiconductors dragged Tech mid-week before the Friday recovery.

***Read:** Rotation is toward the inflation regime: energy and real assets over long-duration defensives and rate-sensitives. Hedgeye's Quad3 playbook favors the same tilt — leadership is moving from “disinflation growth” to “inflation + hard assets.”*

9. Corporate news — the week's key events

- **Oracle (ORCL)** reported Q1 FY27 after the bell Wed 10-Sep: record revenue ~\$19.3B, up ~30% y/y, with the stock initially +~6% after hours. The market's focus: whether the enormous AI/cloud backlog converts to cash and returns, not just headline bookings.
- **Broadcom (AVGO)** was the week's AI cautionary tale — shares fell as much as ~12% intraweek on an expectations reset, dragging the S&P and Nasdaq down over 1% on the worst sessions.
- **Apple (AAPL)** held its “Surprise and Shine” event Tue 9-Sep, unveiling the iPhone 18 Pro / Pro Max and its first foldable, the “iPhone Duo,” starting at \$1,999. The stock avoided the usual sell-the-news, finishing +3.8% on the week.
- **Adobe (ADBE)** also reported during the week, part of a heavy software/AI earnings cluster that kept the AI-capex debate front and center.

10. Macro data — the week's key releases

- **US — August CPI:** headline +0.4% m/m / +3.4% y/y; core +0.3% m/m (slightly hot). *Net: inflation re-accelerated, energy-led — the print that flipped the Fed narrative hawkish.*
- **US — August PPI:** headline +0.4% m/m / +5.4% y/y; core PPI +0.2% m/m; energy +4.2% m/m. *Net: pipeline inflation is hot; the oil pass-through has begun.*
- **US — Jobless claims:** ~206k, roughly in line. *Net: the labor market is still tight enough to give a hawkish Fed cover.*
- **China — August CPI:** +0.8% y/y, up from +0.5%, fuel- and transport-led. *Net: mild reflation off deflationary lows, but domestic demand remains soft.*
- **Europe — ECB:** hiked the deposit rate +25 bp to 2.50% on 10-Sep and raised its inflation forecasts. *Net: the global disinflation trade is on hold; central banks are turning together.*

11. Geopolitics

The **2026 Strait of Hormuz crisis** escalated: US strikes on IRGC targets, Iran signaling readiness for “more intense” conflict, and Houthi attacks toward Saudi Arabia and the Bab al-Mandab. Saudi August crude output fell ~1.9 mb/d to ~6.24 mb/d (lowest since 1990) and tanker rates hit record highs — the supply side of the oil spike.

Prediction markets (Polymarket): “US invades Iran before 2027” sat at ~16% (down from a March peak of ~68%), with the market defining “invasion” strictly as territorial control; “Strait of Hormuz traffic returns to normal by 30-Sep” was priced under 2%. Traders expect a persistent conflict premium in energy without, for now, a full ground war.

***Read:** The tail is disruption-that-persists, not invasion. Position energy for a sustained premium and a fat right tail; the base case is grinding conflict, not resolution.*

12. Beyond the markets — also worth knowing

Summits, conferences & talks

- Apple's “Surprise and Shine” keynote (9-Sep) headlined the corporate-event calendar; the week ahead is dominated by the Fed's two-day FOMC, with the ECB having just moved.

Science & frontier research

- NASA and SpaceX launched the Nancy Grace Roman Space Telescope, bound for Sun-Earth L2 to hunt exoplanets and probe dark energy — a flagship wide-field observatory now on its way.

Space & frontier tech

- SpaceX flew the USSF-153 mission for the US Space Force out of Vandenberg; on Artemis III, engineers finished installing all four RS-25 engines on the SLS core stage — hardware milestones toward the next crewed lunar attempt.

Weather & climate (market-relevant)

- The 2026 Atlantic hurricane season is on track for the latest first hurricane on record — five named storms, none reaching hurricane strength by 11-Sep. Benign for Gulf energy infrastructure and insurers; notably, this cycle's oil risk is geopolitical, not weather-driven.

Water cooler (sport, screen, games)

- US Open tennis reached the men's semi-finals on Fri 11-Sep (Zverev-Khachanov; Shelton-Tiafoe), with the final set for Sun 13-Sep. At the box office, South Korean sci-fi thriller "Hope" joined "Runner" and historical epic "The Uprising" on a quieter release weekend.

13. Appendix — stock cards

Compact cards for the names materially discussed above. Prices/caps are Friday 11-Sep close (verified); P/E is an approximate trailing multiple for orientation only (verify before use). 6-month trend is described in words.

NVIDIA (NVDA) — Semiconductors

Price / week: \$218.29 / -5.2%

Mkt cap / P/E*: \$5.29T / ~46x

Dividend: \$0.28 (yield ~0.1%)

52-wk range: \$164.27 – \$236.54

Key dates: AI-capex commentary; next earnings late-Nov (est.)

6-month trend: Rallied through the spring/summer to fresh highs near \$236, then rolled over this week; sits ~8% below the 52-wk high after the AI-expectations reset.

Read: The bellwether of the trade under pressure; needs the AI-cash narrative to reassert. Watch \$210 support.

Apple (AAPL) — Consumer Electronics

Price / week: \$332.27 / +3.8%

Mkt cap / P/E*: \$4.88T / ~35x

Dividend: \$1.06 (yield ~0.3%)

52-wk range: \$229.02 – \$344.57

Key dates: “Surprise and Shine” event 9-Sep; iPhone Duo launch

6-month trend: Recovered strongly from the low-\$300s over the past six months; now near the top of its 52-wk range and pressing toward \$345.

Read: Product-cycle momentum + a defensive balance sheet; a relative haven in a Quad3 tape. Foldable adds a new upgrade lever.

Alphabet (GOOGL) — Internet / AI

Price / week: \$338.50 / +0.0%

Mkt cap / P/E*: \$4.10T / ~26x

Dividend: \$0.86 (yield ~0.3%)

52-wk range: \$235.84 – \$408.61

Key dates: Gemini / cloud cadence; next earnings late-Oct (est.)

6-month trend: Strong six-month advance off the \$230s toward \$400+, then a consolidation; finished the week flat, mid-range.

Read: Cheapest of the mega-cap AI names on this table; steady but ceding leadership. A wide 52-wk range signals two-way risk.

Microsoft (MSFT) — Software / Cloud

Price / week: \$495.63 / -0.8%

Mkt cap / P/E*: \$3.68T / ~34x

Dividend: \$3.64 (yield ~0.7%)

52-wk range: \$349.20 – \$553.72

Key dates: Azure/AI trajectory; next earnings late-Oct (est.)

6-month trend: Climbed from the mid-\$300s to the \$550s, then pulled back into the high-\$400s; mid-to-upper range.

Read: Quality compounder with the cleanest AI-monetization path; a slow-bleed week, not a break. Watch \$480.

Amazon (AMZN) — E-commerce / AWS

Price / week: \$256.78 / -0.7%

Mkt cap / P/E*: \$2.76T / ~35x

Dividend: None

52-wk range: \$196.00 – \$287.20

Key dates: AWS growth; holiday retail read; next earnings late-Oct (est.)

6-month trend: Ground higher from ~\$196 toward \$287 over six months; consolidating in the mid-\$250s.

***Read:** Cloud + retail levered to the consumer, which an oil tax threatens. Range-bound into the macro test.*

Meta (META) — Social / AI

Price / week: \$648.03 / +5.1%

Mkt cap / P/E*: \$1.65T / ~26x

Dividend: \$2.10 (yield ~0.3%)

52-wk range: \$520.26 – \$790.80

Key dates: AI-capex guide; next earnings late-Oct (est.)

6-month trend: A volatile six months — a run toward \$790 then a sharp retrace to the \$520s; rebounded this week to \$648, mid-range.

***Read:** The week's mega-cap leader; ad engine funds heavy AI spend. But the widest 52-wk range here flags capex-driven volatility.*

Tesla (TSLA) — Autos / Energy

Price / week: \$365.44 / +3.2%

Mkt cap / P/E*: \$1.44T / ~150x

Dividend: None

52-wk range: \$297.38 – \$498.83

Key dates: Delivery cadence; robotaxi/AI narrative; next earnings late-Oct (est.)

6-month trend: Fell from near \$500 to the high-\$290s, then stabilized in the mid-\$300s; lower-half of the range.

***Read:** Highest-multiple, highest-beta name on the board — the most exposed to a rate-hike/duration shock despite the up week.*

Oracle (ORCL) — Cloud / AI infrastructure

Price / week: Reported Q1 FY27 on 10-Sep

Result: Record revenue ~\$19.3B, +~30% y/y; +~6% after hours

Focus: Backlog-to-cash conversion on AI/cloud commitments

Note: Not in the Mag7 table; discussed as the week's key AI print

6-month trend: A blistering run earlier in 2026 on backlog news, followed by give-back; earnings this week reignited the debate.

***Read:** The market wants AI revenue to become AI cash flow. The single most important tell on whether the AI-capex cycle is real.*

14. Sources & disclaimer

Market levels & fundamentals: Financial Modeling Prep data feed (index, Treasury, commodity, crypto, and company endpoints; Friday 11-Sep close). **News, macro & context:** CNBC, Reuters, TheStreet, Charles Schwab, Bloomberg, Yahoo Finance, Benzinga, CNN Business, Al Jazeera, FXStreet, EBC, BLS, EIA, Trading Economics, Polymarket, Hedgeye, Scientific American, NASA/Spaceflight Now, Fox Weather/NOAA. **Regime framework:** Hedgeye (#Quad3 commentary, Sep-2026).

Figures are for the week ending Fri 11-Sep-2026 close unless noted; verify live prices before acting. P/E ratios and the Hedgeye risk-range levels are approximate/derived and were not tied to a primary source at Friday's close — flagged accordingly in-text. This document is for information only and is not investment advice.
