

GLOBAL WEEK AHEAD

The weekend companion to the Daily Need to Know

Everything coming up. Week of Mon 7 September 2026. All times GMT+8.

Published Sunday 6 September 2026, Hong Kong — before the Monday Asia open.

1 · Setup snapshot

Where the majors settled Friday, and the read into Monday. Note: **US cash equity and bond markets are closed Monday 7 September for Labor Day** — Asia and Europe carry the tape, and the US doesn't reopen until Tuesday.

Instrument	Fri Sep 4 close	Day	Into Monday — futures / Asia-open read
S&P 500	7,718.60	▼ 0.38%	US cash CLOSED Mon (Labor Day); index futures thin, reopen Mon eve ET. Heavy into CPI.
Nasdaq Comp	26,506.99	▼ 0.29%	Megacap-led; Apple event + Oracle/Adobe are the week's tech tells.
Dow	53,414.25	▼ 0.51%	Laggard Fri; cyclical hostage to the yield path.
US 10Y	4.79%	▲ ~3bp	Bear-steepening risk; 4.80% is the line in the sand into CPI.
US 2Y	~4.38%	▲ rising	Highest since Jan 2025 as Sep cut is priced out.
DXY	~99.0	▲ firm	Bid post-jobs; a hot CPI extends the squeeze higher.
Gold	~\$4,470/oz	▼ 0.1%	Backed off ~\$4,540 on the real-yield wall; \$4,400 the first support.
Silver	~\$66.97/oz	—	Rangey with gold; industrial bid intact.
Brent	~\$94.71	▼ 1.1%	Up on the week; \$92-96 the working band.
WTI	~\$91.69	▼	Supply headlines + OPEC+ the swing factor.
Bitcoin	~\$79,700	▲ wk-low	Pressured all week by inflation/hike fears; \$78k the level that matters.

Levels are last-verified prints; confirm live before acting. Change = Friday session move.

2 · TL;DR

A four-day week that lives and dies on one number. A hot August jobs report (+162k vs ~55k expected, unemployment 4.1%) has flipped the debate from “how many cuts” to “can they cut at all” — the 2Y is at its highest since Jan 2025 and Sep-cut odds are near zero. **Friday's US CPI (Aug) is the print of the week** and the last major data before the **16 Sep FOMC**; a soft core rescues the cut narrative, a hot one puts a **hike** back on the table. Add ECB, PPI, Oracle/Adobe and Apple's iPhone event and there is plenty to trade around thin, holiday-shortened liquidity.

3 · The big picture — what to watch

1. CPI is the whole ballgame. Nowcasts have headline near +0.3% m/m (~3.4% y/y) and core around +0.2%. With the Fed in its blackout (quiet period began Sat 5 Sep), price is the only vote that counts.

Watch: A core surprise $\geq 0.4\%$ m/m revives **hike** pricing and sends the 10Y at **4.80%+** — a headwind for duration, gold and long-duration tech. A 0.1% core is a green light for the Sep 16 cut and a risk-on unclench.

2. The yield line in the sand. The 10Y at **4.79%** sits right under **4.80%**, a level that has capped equity multiples all year; its 3-month correlation to the S&P has turned negative.

Watch: Above 4.85% the “yields-up/stocks-down” regime bites hardest; a break back under 4.65% is the all-clear for beta.

3. Dollar squeeze vs. risk. DXY near **99** is firm post-jobs. A hot CPI extends the squeeze and pressures EM, commodities and the yen back toward intervention talk.

Watch: USD/JPY and gold are the cleanest expressions — both hostage to the real-yield path this week.

4. Tech carries the index. Breadth is thin; **Apple’s iPhone 18 Pro event**, plus **Oracle** (AI-cloud backlog) and **Adobe** (Firefly monetisation), decide whether the Nasdaq can absorb higher rates.

Watch: Oracle’s RPO/backlog and capex guide is the AI-infra tell for the whole complex; a miss ripples to the chip and power names.

5. China reflation, still MIA. August **CPI/PPI** (mid-week, time TBC) should confirm lingering deflation; the credit-data window (new loans / aggregate financing, any day 10–15 Sep) is the stimulus barometer.

Watch: Another soft print keeps the “policy-put” trade alive in HK/A-shares and pressures industrial commodities and AUD.

6. Holiday liquidity + expiry drift. US closed Monday means an air-pocket tape into a data-heavy back half; next week’s quad-witching (19 Sep) starts to pull on gamma.

Watch: Fade outsized Monday moves in Asia — they often reverse when US desks return Tuesday.

4 · Economic calendar — the week ahead

Day-by-day, all times **GMT+8**. US 8:30am ET releases land at **20:30 GMT+8** the same day. Tentative items flagged; confirm on a live calendar.

Day (GMT+8)	Event	Consensus	Why it matters
Mon Sep 7	US Labor Day — equity & bond markets CLOSED	—	Shortened week; liquidity thin across Asia Monday.
Mon Sep 7	China trade balance (Aug) — tentative	surplus wide	Exports front-run tariffs; read on external demand.
Tue Sep 8	Japan Q2 GDP, 2nd est (07:50)	~0.3% q/q	Confirms soft H1; feeds BoJ normalisation timing.
Tue Sep 8	US NFIB small-biz optimism (18:00)	steady	Hiring/pricing intentions ahead of CPI.
Wed Sep 9	China CPI / PPI (Aug) ~09:30 — time TBC	CPI ~ -0.2% y/y; PPI still negative	Deflation watch; stimulus-response barometer.
Wed Sep 9	US wholesale inventories; 10Y note auction	—	First post-holiday supply test for rates.
Thu Sep 10	ECB rate decision (20:15) + Lagarde presser (20:45)	hold, depo ~2.00%	Guidance on whether the cutting cycle is done.
Thu Sep 10	US PPI final demand (Aug) 20:30	~+0.3% m/m	Pipeline inflation; PCE read-through pre-FOMC.

Day (GMT+8)	Event	Consensus	Why it matters
Thu Sep 10	US weekly jobless claims 20:30; 30Y auction	claims ~230k	Labour-market cross-check into CPI.
Fri Sep 11	US CPI (Aug) 20:30 — THE PRINT	Hdln ~+0.3% m/m / ~3.4% y/y; Core ~+0.2%	Swing factor for the Sep 16 FOMC.
Fri Sep 11	UK monthly GDP (Jul) 14:00 — tentative	~flat	BoE path; sterling risk.
Fri Sep 11	US Univ. of Michigan sentiment, prelim (Sep) 22:00	watch inflation expectations	1Y/5Y expectations are a Fed input.

5 · Central banks & policy events

US Federal Reserve — blackout. No Fed speakers this week; the **quiet period runs through 17 Sep** ahead of the **15–16 Sep FOMC**. Markets price **~86% hold, ~14% hike, ~0% cut** for September (CME FedWatch). This week's CPI/PPI is what moves those odds.

Watch: The debate is genuinely two-sided — a rare setup where a **hike** is a live tail. Front-end rates and USD are the fast money.

ECB — Thu 10 Sep, 20:15 GMT+8. Expected to **hold** (depo ~2.00%) after a long easing run; the question is whether Lagarde signals the cycle is **done**. Presser 20:45 GMT+8.

Watch: Any hawkish “on-hold-indefinitely” tone lifts EUR and bund yields; a dovish door-open does the opposite.

Others. Bank of Canada **held at 2.25% on 2 Sep** (no meeting this week) with a tariff-inflation warning. No BoJ or BoE decision this week — but Japan Q2 GDP (Tue) and UK GDP (Fri) shape their next moves.

6 · Earnings on deck

A quiet calendar dominated by two AI-era heavyweights reporting **after the US close Thursday 10 Sep**. *Dates company-confirmed where marked.

Name	Date	Street	What the market wants
Oracle (ORCL)	Thu Sep 10*	Rev ~\$19.1bn; EPS ~\$1.30	OCI/AI-cloud backlog (RPO) and capex guide — the AI-infra bellwether.
Adobe (ADBE)	Thu Sep 10*	Q3 FY26; DPS growth	Proof AI (Firefly) monetises faster than it cannibalises; net-new ARR.
GameStop (GME)	wk of Sep 7	—	Retail-sentiment/meme tell; balance-sheet strategy.
Kroger (KR)	wk of Sep 7	—	Consumer-staples demand and grocery inflation pass-through.

Read: Oracle + Adobe together are a clean referendum on AI-infrastructure demand vs. AI-software monetisation — the two halves of the trade. Reaction sets the tone for the Nasdaq into CPI the next morning.

7 · Catalysts & events

- **Apple “Surprise & Shine” event — Wed 9 Sep, 10:00 PT (≈ Thu 10 Sep 01:00 GMT+8).** iPhone 18 Pro / Pro Max and a **foldable “iPhone Ultra”** expected; supplier and pricing read-through across Asia tech.
- **US Treasury supply.** 10Y (Wed) and 30Y (Thu) auctions are the first post-holiday demand tests — tails would add to the yield pressure into CPI.
- **China credit window (10–15 Sep).** New loans / aggregate financing land any day — the cleanest stimulus signal.
- **Fed blackout → FOMC (15–16 Sep).** This is the last full data week before the decision; positioning skews defensive into it.
- **Options drift.** September **quad-witching on 19 Sep** begins to anchor dealer gamma late in the week.

8 · Rates, currencies & commodities — levels to watch

Rates. 10Y range **4.62–4.84%**; **4.80%** is the pivot. 2Y **~4.24–4.45%** — a break above 4.45% cements “no cut.” Curve bear-steepens on a hot CPI, bull-steepens on a soft one.

FX. DXY 97.9–99.8. EUR hinges on the ECB tone (Thu); USD/JPY on US real yields — **watch 150+** for verbal-intervention risk; AUD is the China-data proxy.

Commodities. Brent **\$92–96**, WTI **~\$90–93** — OPEC+ headlines and inventories drive. Gold **\$4,360–4,585**: capped by real yields near-term, but the **\$4,100–\$5,200 dispersion** across major desks shows how much the Fed decision matters. Silver firm with a live industrial bid.

Watch: Gold's tell is real yields, not headline CPI — a hot print that lifts reals is the bearish combination; a soft print that caps reals reopens the highs.

9 · Hedgeye risk ranges & regime

Regime. The prevailing signal is a **Quad 4-leaning, inflation-sticky** backdrop — decelerating growth impulse with inflation refusing to fully roll — which argues for quality over beta, a long-dollar tilt, and respect for the yield ceiling on multiples.

Immediate-term risk ranges (indicative, into the week):

Instrument	Buy / low	Sell / high	TREND
S&P 500	7,610	7,790	Bullish
Nasdaq Comp	26,050	26,880	Bullish
US 10Y yield	4.62%	4.84%	Bullish (yields)
UST 2Y yield	4.24%	4.45%	Bullish (yields)
DXY	97.9	99.8	Neutral
Gold	\$4,360	\$4,585	Bullish
Bitcoin	\$76,500	\$85,000	Bearish

Note: a live subscriber pull of Hedgeye's exact daily risk ranges was not available for this run; the table above is indicative, derived from recent price/volatility and anchored to Friday 4 Sep closes. Treat it as a map, not gospel — confirm against the current Hedgeye Risk Range Signal before acting.

Where we sit / what changes the regime. Equities sit mid-to-upper range with a **bullish TREND** intact but a yield cap overhead; the regime turns **hostile** if the 10Y closes and holds above **4.85%** (breaks the equity range low) or if core CPI prints $\geq 0.4\%$. It turns **friendly** — broadening beyond megacap, gold to new highs — on a soft core CPI that pulls the 10Y back under 4.65% and greenlights the 16 Sep cut.

10 · Positioning & themes

Crowded / stretched. Long megacap-AI and long-USD are consensus; **VIX ~14–15** (subdued) means cheap hedges into a binary CPI — an asymmetric setup to own optionality, not sell it.

Rates positioning. Duration longs have been squeezed as Sep-cut hopes faded; a soft CPI is the pain trade higher in bonds, a hot one extends the bear-steepener.

Credit / vol tells. Watch IG/HY spreads for any widening as the yield ceiling is tested; a VIX pop through **18** with credit leaking would be the first sign the “benign” tape is cracking.

Watch: Breadth is the honest tell — if the equal-weight index and small caps can't join a soft-CPI rally, treat the bounce as sell-able.

11 · Geopolitics — what's live

- **US government funding.** The **1 Oct** deadline looms; prediction markets put a shutdown around **10-16%** (Polymarket/Kalshi, mid-Aug) — low but rising as a Q4 tail. Not a this-week event, but headlines can move front-end rates.
- **Fed policy as 'geopolitics.'** Event-contract markets show **~28% hike** odds on some venues vs. futures — a genuine two-way split worth watching for signal.
- **Trade / tariffs.** Tariff-driven inflation risk (flagged by the BoC) remains the slow-burn macro theme feeding the CPI narrative.
- **Energy geopolitics.** Brent near **\$95** keeps supply-side headlines (OPEC+, sanctions) in the price — an upside inflation risk that complicates the Fed.

12 · Asia setup — Monday open

Asia opens Monday **without a US cash session** (Labor Day), so expect **thin, headline-driven trade** and a tendency to drift on Friday's risk-off close. Japan trades its **Q2 GDP (Tue)** with a firm-yen bias if US yields wobble; China/HK lean on the **CPI/PPI and credit** data mid-week and any weekend policy noise. **Intraday tells:** USD/JPY direction, the CNH fix, and whether HK tech can hold — and remember Monday's move is low-conviction until US desks return Tuesday.

13 · Beyond the markets — coming up

- **Tech.** Apple's **iPhone 18 Pro / foldable "Ultra"** reveal (Wed 9 Sep, US) is the consumer-tech event of the month.
- **Space.** A busy commercial-launch cadence continues; check live manifests for any crewed or high-profile payload windows this week.
- **Sport & culture.** The tennis US Open reaches its finals weekend (early Sep); Europe's football seasons are in full swing.
- **Screens & releases.** Autumn film and game slates ramp — a tailwind for media/streaming names into Q4.

(Cultural/space items are directional; confirm exact dates/times before relying on them.)
